

FALK™ WRAPFLEX® ELASTOMERIC COUPLINGS

INCH FULL SPACER TYPE R31 SERIES

Falk™ Wrapflex® Full Spacer Type R31 Elastomeric Couplings are specifically structured for standard ANSI/ASME process pump spacing requirements. Utilizing a flexible polyurethane element insert with a split-half wrap layout, the Type R31 provides exceptional torsional damping and shock protection while allowing full center element replacement without requiring relocation of connected drive hubs or machinery alignment settings.

Technical Notes & Engineering Guidelines:

- Total assembly weights are tabulated for average pilot-bored setups. Keyways and final finish boring profiles dynamically adjust the overall weight index.
- Full spacer configurations are optimized to match standard distance-between-shaft-ends (DBSE) spacing intervals across popular pumping systems.
- The tough polyurethane split element prevents metal-to-metal contact, damping severe vibration spikes while remaining resistant to petroleum products, moisture, and chemical washes.
